

SMILE PROJECT

>>> SUMMARY

In our ongoing journey towards fostering climate change awareness and sustainable mobility, we are thrilled to provide you with the latest project update. The SMILE initiative has made significant strides, and we are now shifting gears as we progress from Work Package 2 (WP2) to Work Package 3 (WP3). Our commitment to the first general SMILE objective—to design a tailored methodology and empower primary and secondary teachers to engage students in the critical fields of climate change and STEAM education—is unwavering. With your support, we are making great strides towards a more sustainable future.

In this WP we have achieved crucial milestones for our project. We've developed the SMILE Methodology, rooted in Design Thinking, and established national SMILE committees with diverse stakeholders. Additionally, we've created the SMILE e-Guide, providing educators with practical guidelines based on extensive research. WP2's achievements set the stage for our mission to promote sustainable mobility and climate change awareness as we move forward.

WP 2 <<<

>>> WP3

Significant achievements have been realised to advance our project's goals. The development of the SMILE e-learning space ensures accessible and secure support for SMILE activities. Moreover, the creation of SMILE learning modules empowers teachers and educational leaders with knowledge on climate change and sustainable mobility. These modules, based on the GreenComp framework, cover various aspects of sustainability. Additionally, the SMILE Training Curriculum, also aligned with GreenComp, offers educators practical resources for integrating sustainability into their teaching. WP3 is a pivotal step toward equipping educators and leaders to promote sustainability and climate change awareness, fostering a more sustainable future.
